- Fermentation
- Purification
- Bioassay
- Formulation
- Aseptic vial filling
- Syringe filling
- Lyophilization
- Terminal sterilization
- Clinical supply production
- Commercial production
- Commercial distribution

Facilities

Cangene's Research and Development and Contract Manufacturing group supplies material for Phase I through Phase III clinicals and provides

commercial production for its clients. Incorporating research, full product/process development and non-clinical/clinical skill sets, this experienced group is responsible for discovering and/or developing innovative therapeutic products and technologies. Cangene can custom design unique aseptic filling and lyophilization processes as well as customized inspection, labeling bulk packaging and shipping methods for our clients. Current capacity provides for lot sizes from 500 to 100,000 units. Cangene can accommodate vials from 2mL to 100mL and syringe products.

Cangene's facilities meet the international regulations required to service clients from all over the world. Cangene has submitted a drug master file with the FDA as well as many other agencies and currently manufactures commercial products approved for distribution in over 50 countries including the United States, Canada, Japan, Brazil, and most of Europe.

Markets Served

Cangene develops and manufactures injectables for both large and small pharmaceutical and biopharmaceutical companies located in the United States and international markets. Cangene is completely dedicated to brining its clients' products to market in a timely and cost-effective manner.
