DFE Pharma

Corporate Description

DFE Pharma is a global leader in the manufacture and supply of excipients for use in the pharmaceutical industry. DFE Pharma develops, produces and markets excipients for oral solid dose and dry powder formulations. Although the new DFE Pharma brand name is only one year old, the company's roots go back more than 100 years, having been formed from the merger of DMV International, Lactose New Zealand and DOMO-pharma. With over 100 years' experience of manufacturing capability, in-depth know-how and outstanding expertise with a wide variety of excipients, DFE Pharma is one of the key global players in the industry.

Our vision is the 'Pursuit of Excipient Excellence'—to help people live healthy lives. We work with the pharmaceutical industry to maximise our customers' potential, through product quality, expertise, supply reliability and strategic partnership in developing new, more effective solutions. DFE Pharma can help pharmaceutical companies reach new performance levels by building on the knowledge, innovative capability and exceptional partnering potential we offer.

Markets served

With a global presence and advanced manufacturing facilities, we not only provide high quality products but also sensitive, targeted services aimed at improving our customers' performance, pharmaceutical companies all over the world. Our major international sales offices are based in Germany, the US, Singapore, India and Japan. With our sales office and warehouse in New Jersey we supply customers all over the US.

Products & services

DFE Pharma has perhaps the most comprehensive product range in the market, covering the excipients used in all key formulations. Our portfolio covers major forms of starch for pharmaceutical use; the widest product range of

lactose-based excipients, including our new and highly advanced SuperTab® 24AN anhydrous lactose formulation; inhalation grade lactose tailored to fit customers' demands and fast-acting superdisintegrants.

We pursue excipient excellence and want to gain leadership in excipient expertise, in supply and in minimising time to market. We cover all major excipients as used in pharmaceutical formulations today. We aim for leadership in the wider field of excipients, such as with micro crystalline cellulose (or MCC), reaching all continents and cultures, and touching the lives of more people all over the world than ever before.

DFE Pharma provides advisory and support services to formulators, developing complete solutions targeted at highly specific performance requirements. Our new website offers access to our online knowledge database; registration processes become more efficient through the online availability of our QA -and regulatory documentation.

Facilities

We have production locations in Germany, the Netherlands, New Zealand and India, all of which are based on ISO 9001:2008, IPEC, PQG and cGMP and, where applicable, ICH Q7 as well. We can provide assured supply, from more than one source, to the highest quality standards, anywhere in the world.
