PACKAGING Equipment and Supplies

rommelag USA, Inc.

Corporate Description

rommelag® provides Advanced Aseptic liquid packaging solutions with its BOTTELPAK® Blow/Fill/Seal (BFS) technology. Gerhard Hansen invented Blow/Fill/Seal technology in 1953. Since then rommelag® has developed multiple aseptic packaging solutions to meet our customer's requirements. We provide the highest level of customer support and associated services. Coupled with the contract manufacturing skills found in rommelag®'s sister companies, maropack and HOLOPACK®, a product can be moved from concept to commercial production.

- Container design and closure prototyping and development
- Container sizes from 0.1 mL to +1000 mL
- Functional confirmation trials and tests
- cGMP stability and phase II and phase III clinical trial production
- BFS Commercial production through machine supply or CMO.

rommelag® is the primary Blow/Fill/Seal technology provider to the world's end users and contract manufacturers. Throughout the years rommelag® has promoted Blow/Fill/Seal into new applications through direct development and work with our customers. The technology is recognized as an Advanced Aseptic technology by the major worldwide regulatory bodies.

We develop the aseptic packaging solutions to meet our customers' needs.

Contract manufacturer maropack, located in Zell Switzerland, has taken Blow/Fill/Seal technology to a new level with the first BFS system installation into a BSL-2 compliant facility. This facility is designed to test and produce bi-

ological products: vaccines, antibodies, enzymes and immunological substances, and is capable to meet the higher personnel safety levels required to produce these products. maropack has also developed new cold chain controls that are typically required for biological products, this includes *Cool BFS Technology™* created by rommelag to meet the product's requirements.

HOLOPACK®, located in Sulzbach-Laufen Germany, is a contract manufacturer that currently produces over 150 products for more than 100 customers. They provide technical skills and knowledge resources to Blow/Fill/Seal customers around the world. Customers can use their own custom container or have access to more than 300 stock mould combinations. With over 30 Blow/Fill/Seal systems in operation they have the flexibility and capability to bring in a new product for tests and trials.

HOLOPACK® and maropack produce products for the major pharmaceutical markets and have been inspected by the respective regulatory bodies.

The Hansen family and company group with over 1500 employees continue to provide the best in innovative and cost effective aseptic packaging solutions with their Blow/Fill/Seal technology.
