NSF International Health Sciences

Corporate Description

NSF Health Sciences Division offers training and education, consulting, auditing, GMP and GLP testing, certification, R&D, and regulatory guidance for the pharmaceutical industry throughout the product lifecycle. The division also supplies pharmaceutical secondary reference standards, traceable to USP and EP standards. NSF's Health Science Division operates globally to respond immediately to pharmaceutical needs.

Major Products/Services

NSF-DBA offers cGMP consulting, training, and auditing in pharmaceutical quality management and regulatory compliance providing services throughout the Europe, South Africa, and the United States. NSF-DBA services are the first choice of major multinationals and small start-up ventures on every continent, and all are given with one aim in mind; to train your people to the highest standards and offer the best possible advice to contribute to your company's success.

NSF Pharmalytica provides analytical testing, consulting, and research and development (R&D) services, expanding NSF's Health Sciences service offerings to the pharmaceutical, biotech,

and medical device industries. NSF Pharmalytica operates primarily as a GLP & GMP contract laboratory, offering a wider array of independent testing and analytical services.

NSF Reference Standards meet the identity, strength, purity, and quality requirements expected by the global pharmaceutical industry. Every NSF Reference Standard candidate goes through an extensive process of qualification and approval before reaching the customer and is traceable to official pharmacopeial standards, as established by the United States Pharmacopeia (USP) and the European Pharmacopeia (EP). They are available for purchase via our website or through a local distributor.

Becker & Associates Consulting provides regulatory and compliance expertise to the medical device, pharmaceutical, and biologics industries. Becker's core specialty is the design and implementation of strategic solutions to resolve, or prevent, challenges posed in the development and marketing of innovative healthcare products. Becker works to assure their clients the highest level of expertise, including access to a select network of former-FDA, industry and subject matter experts.
